The students learn that butterflies need nectar. Nectar is a sweet liquid found in plants. Butterflies like to drink from mud puddles, too.

They stay warm on rocks under the sun. They stay safe at night if a tree is nearby.

## LET'S EXPLORE MATH

The students plant rows of plants that caterpillars like. They plant burdock, hollyhocks, and daisies. They use the pattern below.

<b>B</b> = burdock	<b>H</b> = hollyhocks	<b>D</b> = daisies
--------------------	-----------------------	--------------------

- If the pattern continues, what type of plant is in the next row?
- If the pattern continues, what type of plant is in the 12th row?
